## Producing tables of finished dimensions

### Objective:

Development of ready made measurement tables for garments based on pattern dimensions, in order to make preparation of the production documentation faster and more efficient

### Description:

- To produce company-specific tables for ready made measurements and technical drawings, related to design-specific requirements, based on company's specific body measurement tables for different target groups
- To produce tables of finished dimensions and technical drawings in different designs and fit categories based on one company-specific reference garment
- To prepare tables of finished dimensions and technical drawings for clothing products for special target groups in different fit categories

### Customer benefit:

- You use standardised tables of ready made measurements  
You use consistent, tables of ready made measurements across your whole product range
- The fit is more reliable because the tables are based on the pattern design - shapes are graduated to suit size-specific body types
- You can compare with your company's own tables of finished dimensions

### Requirements for test samples/duration of testing:

Depends on the required objective
