## Ecolabel Performance Test

---

### Objective:

A comprehensive, practical laundering test is carried out accordingly to the testing program of February 10, 2011.

### The test is well-suited for:

- Powder, tablet or liquid products
- Heavy duty detergents
- Colour safe detergents
- Light duty detergents

### Description:

Primary and secondary laundering effects will be tested in comparison to a product group-dependent reference:

- Stain and soil removal on standard stains
- Soil antiredeposition capability after 15 laundry cycles
- Dye-transfer inhibition in a Linitest device (colour safe detergents and in case that colour care is claimed).
- Colour maintenance test on 14 dyes after 15 laundry cycles (colour safe detergents and in case that colour care is claimed)

Testing conditions and results of the evaluation are summarized in a test report.

### Advantages for you as the customer:

- Key tests are carried out first, according to agreement. In case of failure lower costs incurred.

### Labels and certificates:

- In addition to the test report a confirmation of passing the performance test according to the testing programme is issued in case of a successful completion of the performance test.

### Requirements for test samples:

#### General information:

- Marketable samples and dosage instruction (normal soil level)
- The test institute provides the given reference product and corresponding test textiles.

#### Amount of material:

- Depending on test volume.

#### Duration of testing:

- Depending on the test volume and product group.
