

Review of construction data

Goal:

Significantly responsible for the quality of textiles is the construction of the area-measured materials.

The Hohenstein Institute offer a variety of tests for the testing of material specifications which check the compliance with the requested quality.

These tests are particularly suited for:

- All types of clothing
- Home textiles and bedding
- Bulk stock

Description:

The following parameters can be tested:

- Mass per unit area DIN EN ISO 12 127
- Yarn fineness/-twist DIN 53 830-3
- Yarn Type OE or ring spun yarn, combed or carded
- Yarn density DI EN 1049-2
- Filamentfadenzahl

Your benefits as orderer:

- Assurance of the product quality
- Continuous monitoring of the product quality
- Comparative evaluation of the supplier
- Quality assurance for follow-up orders

Specifications for the test samples:

General:

New condition of the test samples

Material amount:

At least 2 test samples or 1,0 m² material

Test duration:

10 work days
