

# **DETOX TO ZERO**

## **by OEKO-TEX®**

### What is DETOX TO ZERO by OEKO-TEX®?

DETOX TO ZERO by OEKO-TEX® is a status report for manufacturers to evaluate their chemicals management and the quality of their waste water and sludge with regard to compliance with the Greenpeace Detox campaign goals.

The key points of DETOX TO ZERO are analysis and evaluation in the following areas:

- Waste water and slurry conformity in accordance with the DETOX TO ZERO MRSL (Manufacturing Restricted Substances List)
- Conformity of chemicals stored in the company as per the DETOX TO ZERO MRSL
- Company management (management system and structural organisation, compliance with legal requirements for the storage and handling of chemicals, environmental protection, health and safety of employees, production process)

### Your route to the DETOX TO ZERO status report:

- An annual status report on DETOX TO ZERO performance, which can be used to verify conformity with the goals of the Greenpeace Detox campaign
- A plan with specific correction actions for the continual improvement of services relating to the Detox criteria
- A change to globally express the efficient, credible and sustainable process in procurement and to reinforce the processes and product safety within the textile value creation chain

## How is DETOX TO ZERO integrated in the OEKO-TEX® system?

With an existing DETOX TO ZERO status report, expansion to the integral production facility certification STeP by OEKO-TEX® is easy to achieve. The status report on DETOX TO ZERO performance is then shown on the STeP certificate.
